ABOUT ME

I am a dedicated professional who constantly strives to enhance my skills and actively contributes towards the creation or enhancement of products and processes in the companies I work with. I am particularly enthusiastic about the Javascript ecosystem, including React Native, React.js, and Node.js frameworks. With 3+ years of experience as a mobile developer, I have become deeply interested in front-end development. I am currently seeking projects that allow me to further advance my frontend development skills and apply my expertise to deliver exceptional, user-friendly mobile experiences, while also being open to working with other technologies.

PROFICIENCY STACKS

REACT NATIVE	3 years
Javascript	3 years
Typescript	2 years
NodeJS	2 years

PORTFOLIO

- website@luisa.dev
- instagram@luisa.dev

STRENGTHS & SKILLS

- State management tools (Redux/Redux Saga, React Context API and MobX).
- Worked with both SQL and noSQL databases (PostgreSQL, MongoDB, and RealmDB).
- Code versioning and hosting (Git, Github, Azure).
- Keen interest in UI/UX design.
- Problem-solving, team worker, self-taught, fast learner.
- Communicative, organized, reliable, detail-oriented.

WORK EXPERIENCE

Mid-level Mobile Developer

Lojas Riachuelo
A retail chain of Riachuelo, Casa Riachuelo, and Carter's stores, with a strong presence in both e-commerce and 396 physical locations

across Brazil, owned by Grupo Guararapes, the largest textile group in Latin America.

📅 Jan 2021 – Jan 2023 📍 Remote/Brazil Business area: Retail

Project 1: PDV Omni
- Main goal: Allow sales associates to provide a more convenient and portable shopping experience by processing transactions from anywhere on the sales floor
- Details and responsibilities: Replaced legacy systems with a focus on omnichannel integration; Designed user interfaces and architectures based on offline-first principles; Provided maintenance and support for various tools, including printers, scanners, and other peripherals that were previously implemented by other developers
- Outcome: Enable retailers to adapt to changing business needs; Provide a flexible shopping and payment solution
- Technologies: React Native · TypeScript · Android · Realm Database · Node.js · Redux

Project 2: Selfcheckout
- Main goal: Reduce wait times and labor costs
- Details and responsibilities: Focus on performance, due to hardware limitations; Build interfaces for different screen dimensions; Maintained various tools such as printers, scanners, and other peripherals
- Outcome: Decrease in queue formation, which can increase the likelihood of customers making a purchase; Collection of valuable data on customer behavior and purchase patterns to improve marketing strategies and product offerings
- Technologies: React Native · TypeScript · Android · Realm Database · Node.js · Redux

Entry-level Mobile Developer
ma9
A fintech company that offers technological solutions for the financial sector.

📅 Nov 2019 – Jun 2020 📍 Brazil Business area: Finance

Project 1: PagueOn
- Main goal: Provide users with a convenient way to manage their finances, make payments, and access other financial services
- Details and responsibilities: During the development process, I worked closely with a team of developers, designers, and stakeholders to prioritize security measures such as biometric authentication and asymmetric encryption to safeguard sensitive information
- Outcome: During my time on the team, the project remained in its early stages and did not progress to the production phase. However, the experience gained while working on it allowed me to develop new ideas for financial matters that can be implemented in future projects, making it a valuable learning experience.
- Technologies: React.js · React Native · Async Storage · JavaScript

EDUCATION

Technician in Informatics
Federal Institute of Education, Science, and Technology of Sergipe

📅 Jun 2015 – Aug 2018
